

SMART PRESSURE TRANSMITTER

APCE-2000

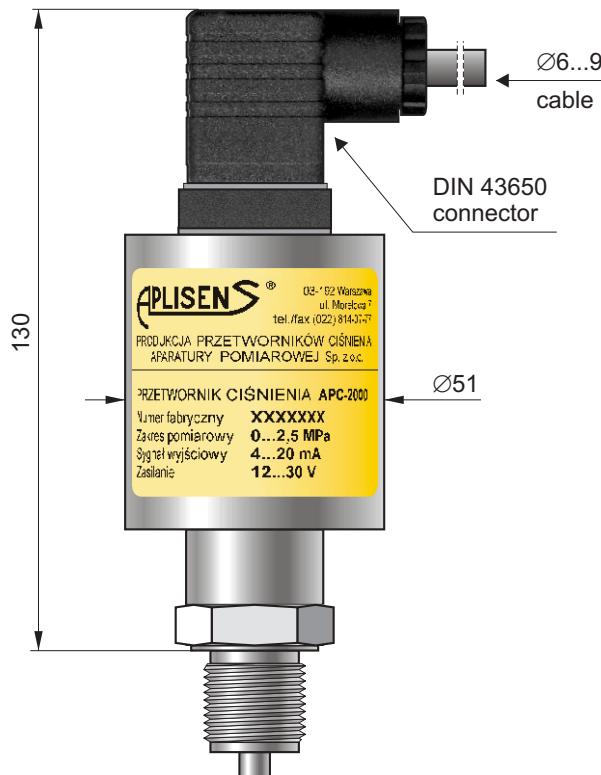

Aplicens
KAP-03
Communicator

- ✓ 4...20 mA output signal + HART protocol
- ✓ ATEX Intrinsic safety
- ✓ Accuracy 0.1%
- ✓ Rangeability 100:1

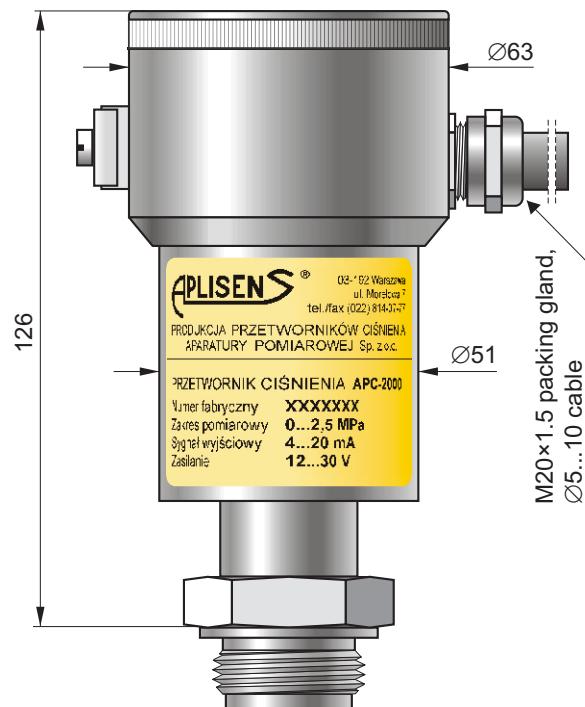

Application

The APCE-2000 pressure transmitter is applicable to the measurement of the pressure, underpressure and absolute pressure of gases, vapours and liquids. The active sensing element is a piezoresistant silicon sensor separated from the medium by a diaphragm and by specially selected type of manometric liquid.

APCE-2000PD

APCE-2000PZ

PD version

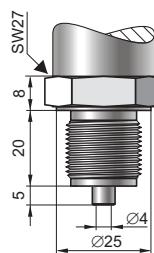

Stainless steel casing with standard DIN 43650 connector, degree of protection IP-65. The electronics are encased in a protective silicone gel. ATEX Intrinsic safety versions are available for taking measurements in the zones under explosion hazard.

PZ version

Casing made entirely from stainless steel, with high mechanical strength, degree of protection IP-65. The electrical connections enable the output current to be measured without breaking the circuit. The electronics are encased in a protective silicone gel. ATEX Intrinsic safety versions are available for measurements in zones under explosion hazard.

APCE-2000PZ transmitters may operate in extreme conditions, in the presence of corrosive gases, e.g. hydrogen sulphide, and at very low temperatures.

Process connections

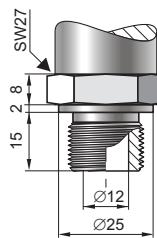

G1/2 type
G1/2", Ø4 hole

M type
M20x1.5, Ø4 hole

Wetted parts material: 316Lss

Application

Applicable to measurement the pressure of uncontaminated gases, vapours and liquids at any measuring ranges.

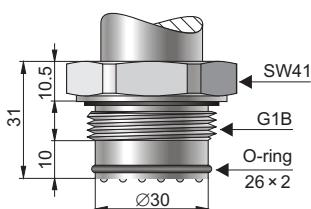

GP type
G1/2", Ø12 hole

P type
M20x1.5, Ø12 hole

Wetted parts materials: 316Lss – standard
Hastelloy C-276

Application

Applicable to measurement the pressure of viscous and contaminated media. Max. measuring range 0...70 bar.

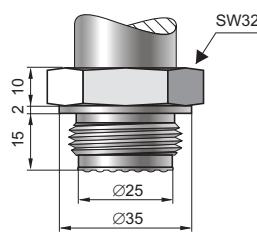

CG1 type

G1" with flush diaphragm
Wetted parts material: 316Lss

Application

Applicable to measurement the pressure of dusty gases, and viscous or solidifying liquids. at the measuring ranges from -100...100 mbar to 0...70 bar.

The transmitters with flush diaphragm are applied in food industry and pharmaceutical industry in aseptic systems. Using of Aplisens fitting sockets with a seal upstream the process connection (see page 64) is recommended.

CM30x2 type

M30x2 with flush diaphragm

Wetted parts materials: 316Lss – standard
Hastelloy C-276

Communication and configuration

The communication standard for data interchange with the transmitter is the HART protocol.

Communication with the transmitter is carried out with:

- ◊ a KAP-03 communicator,
- ◊ some other Hart type communicators,
- ◊ a PC using an RS-HART converter and RAPORT-01 configuration software.

Along with the RAPORT-01, the SECTIONAL LINEARIZATION software is supplied. The software enables leading of the 21-point, non-linear user's characteristic into the transmitter.

The data interchange with the transmitter enables the users to:

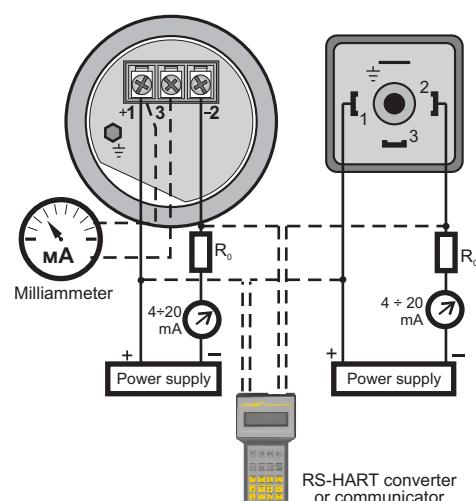

- ◊ identify the transmitter;
- ◊ configure the output parameters:
 - measurement units and the values of the start points and end points at the measurement range;
 - damping time constant;
 - conversion characteristic (inversion, user's non-linear characteristic);
- ◊ read the currently measured pressure value of the output current and the percentage output control level;
- ◊ force an output current with a set value;
- ◊ calibrate the transmitter in relation to a model pressure.

Installation

The transmitter is not heavy, so it can be installed on the installation. When the pressure of steam or other hot media is measured, a siphon or impulse line should be used. The needle valve placed upstream the transmitter simplifies installation process and enables the zero point adjustment or the transmitter replacement. When the special process connections are required for the measurement of levels and pressures (e.g. at food and chemical industries), the transmitter is provided with an Aplisens diaphragm seal. Installing accessories and a full scope of diaphragm seals are described in detail in the further part of the catalogue. The transmitter's electrical connections should be performed with twisted cable. The place for the communicator should be assigned before the communicator installation.
